<https://lcpq.github.io/pterosor>

PTEROSOR has received funding from the European Research Council (ERC) under the European Union's Horizon 2020 research and innovation programme (Grant agreement No. 863481).

What's the problem ?

Methods using Casida-like equation are blind to double excitations:

$$\begin{pmatrix} R & C \\ -C^* & -R^* \end{pmatrix} \begin{pmatrix} X_m \\ Y_m \end{pmatrix} = \Omega_m \begin{pmatrix} X_m \\ Y_m \end{pmatrix}$$

With

$$\begin{aligned} R_{ia,jb} &= \delta_{ij}\delta_{ab}(\epsilon_a^{KS} - \epsilon_i^{KS}) + 2(ia|bj) + f_{ia,bj}^{xc} \\ C_{ia,jb} &= 2(ia|jb) + f_{ia,jb}^{xc} \end{aligned}$$

for TD-DFT, and with

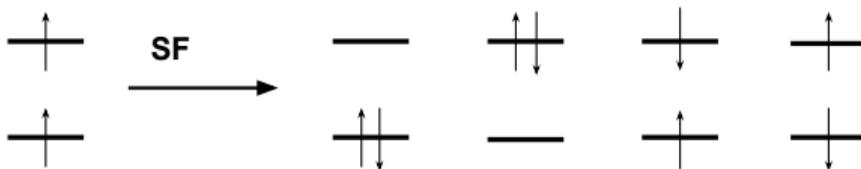

$$\begin{aligned} R_{ia,jb} &= \delta_{ij}\delta_{ab}(\epsilon_a^{GW} - \epsilon_i^{GW}) + 2(ia|bj) - W_{ij,ba}^{stat} \\ C_{ia,jb} &= 2(ia|jb) - W_{ib,ja}^{stat} \end{aligned}$$

for BSE

What's the solution ?

The solution is to use the spin-flip methods formally introduced by Krylov in 2001 for CI and EOM-CC ¹²

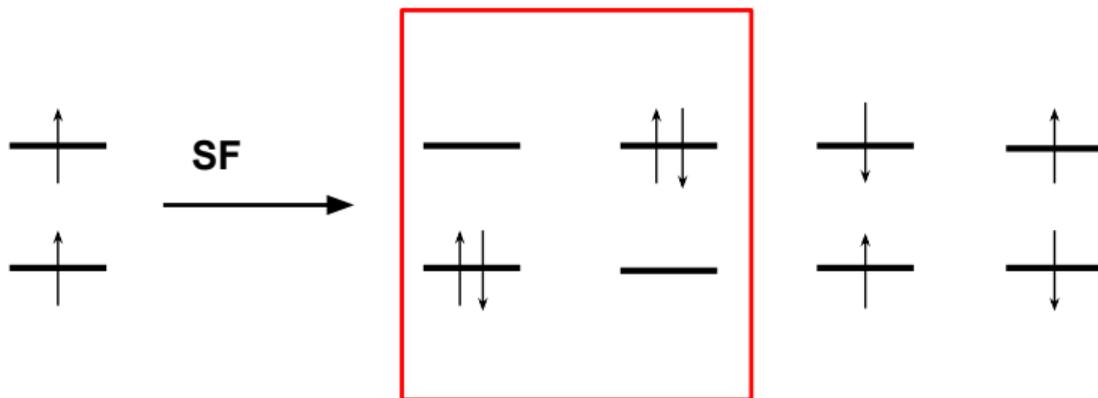

¹A. I. Krylov, Chem. Phys. Lett., 2001, 338, 375–384.

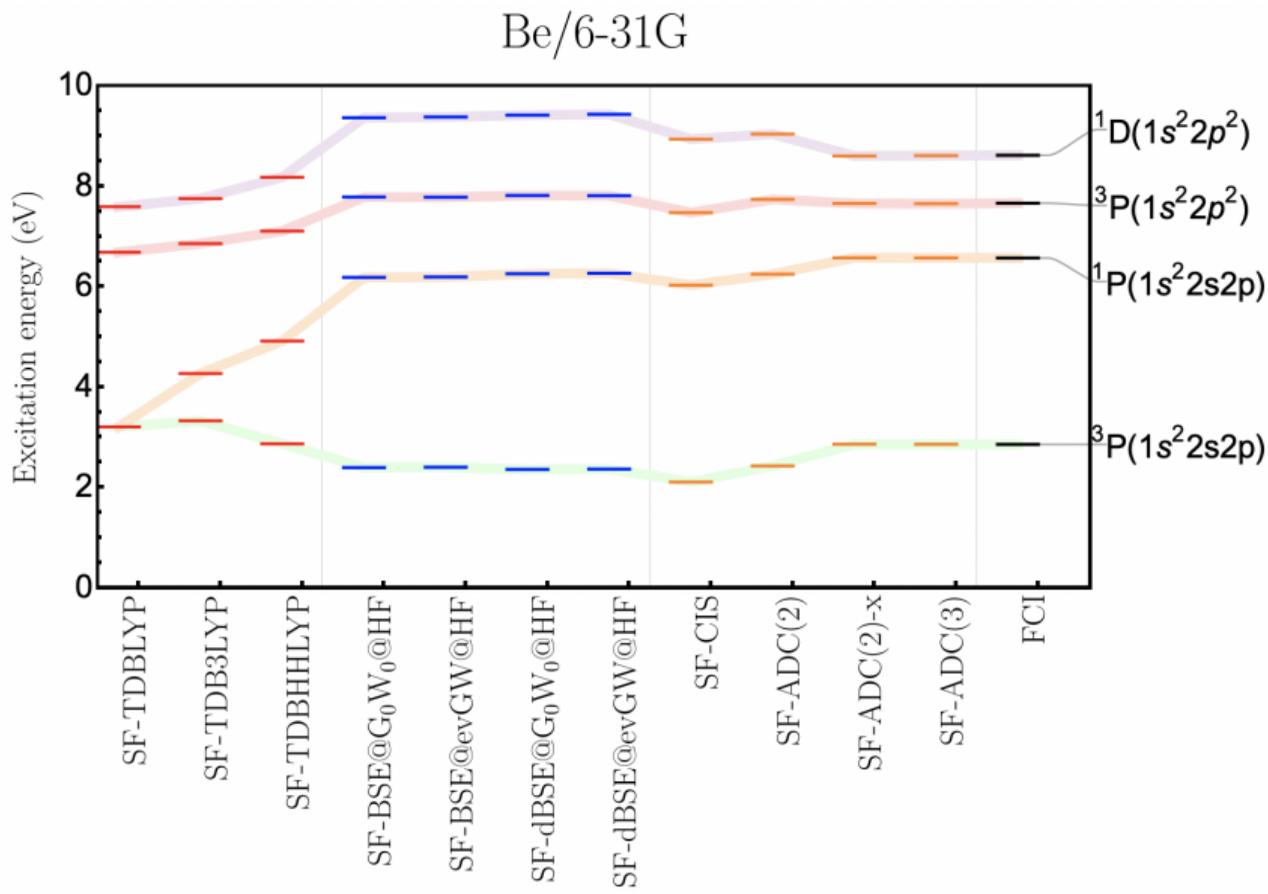

²A. I. Krylov, Chem. Phys. Lett., 2001, 350, 522–530.

What's the solution ?

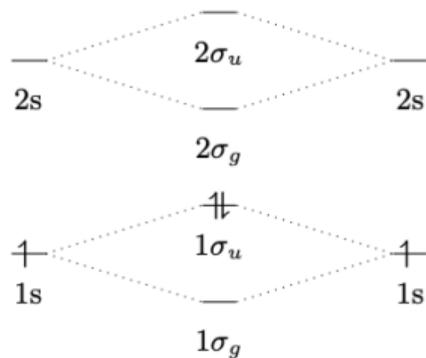

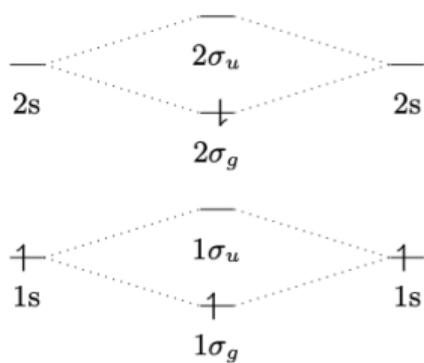

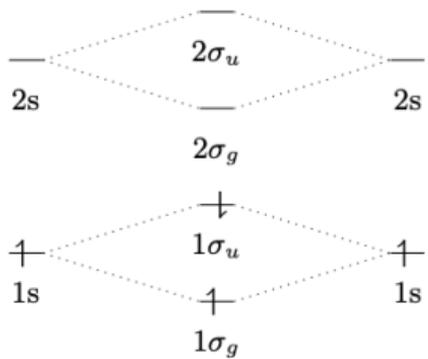

The solution is to use the spin-flip methods formally introduced by Krylov in 2001 for CI and EOM-CC

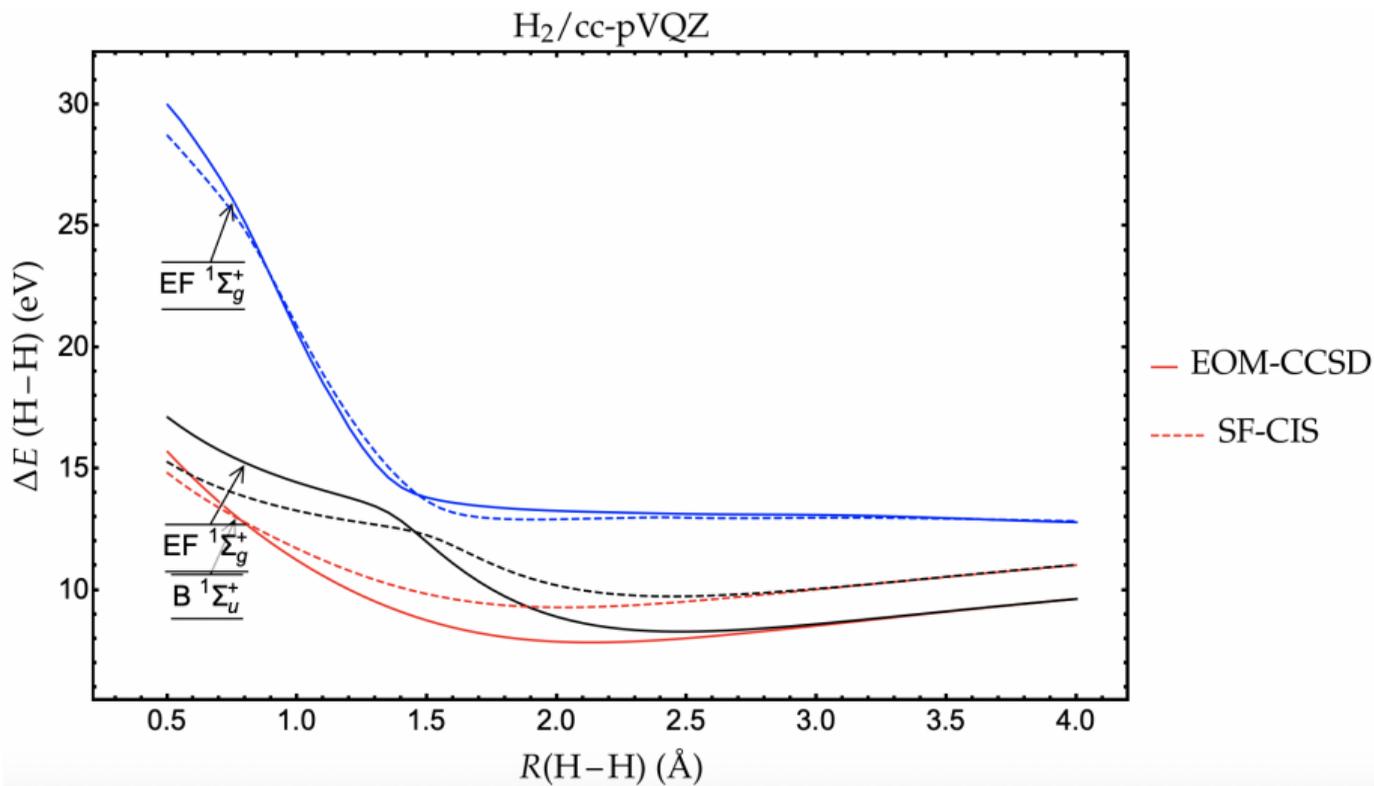

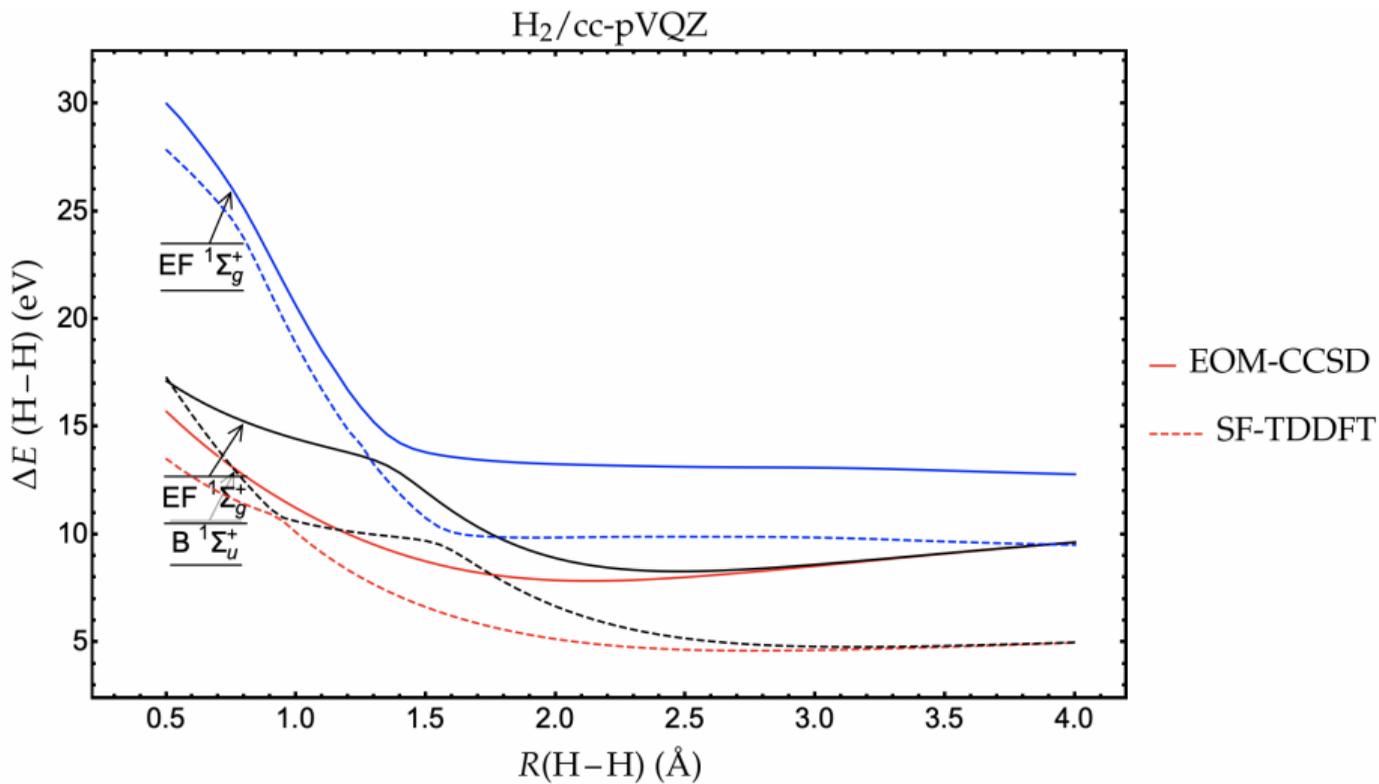

H₂ molecule
